

## Imported text comes into EngraveLab as a combined object.

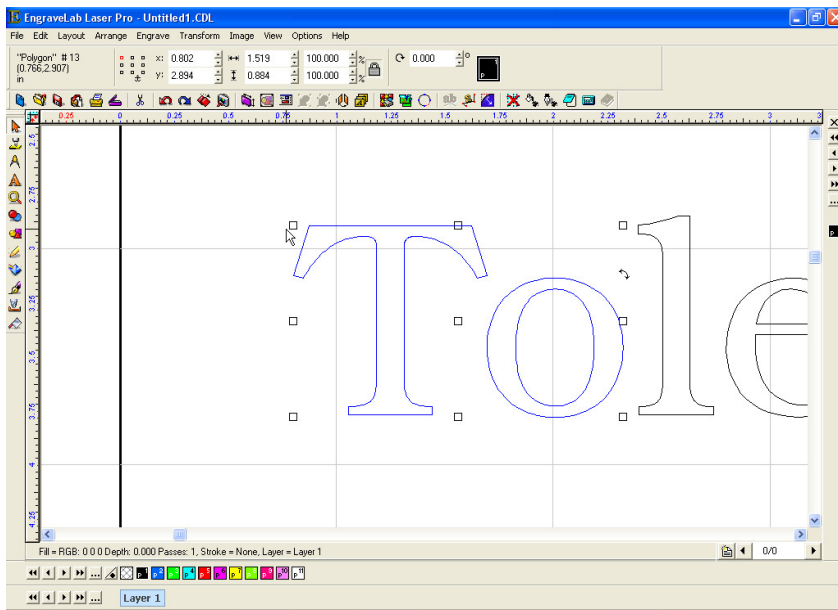

The centers of text are fill when they are combined as an object.

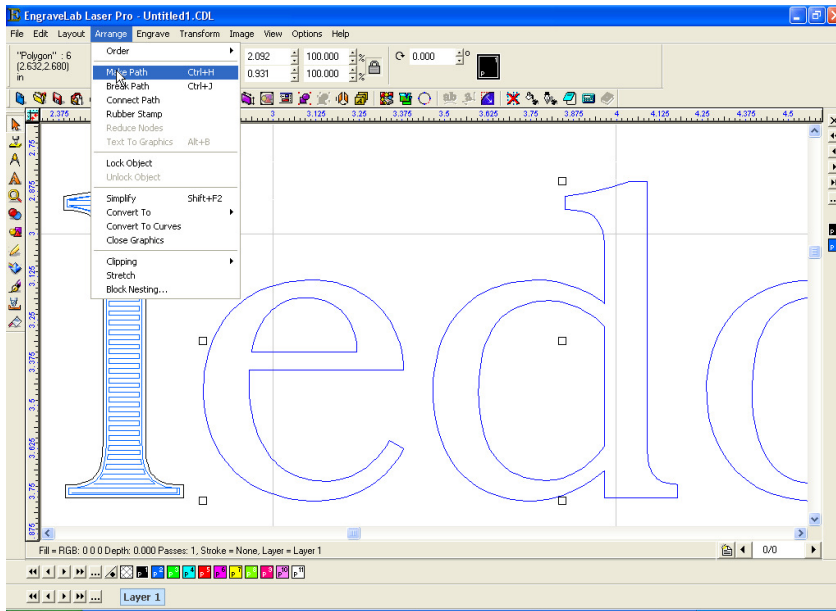

First you have to break the path (revert a combined path of objects into individual paths for each object)  
Select the text go to arrange > break path> then delete the fill.

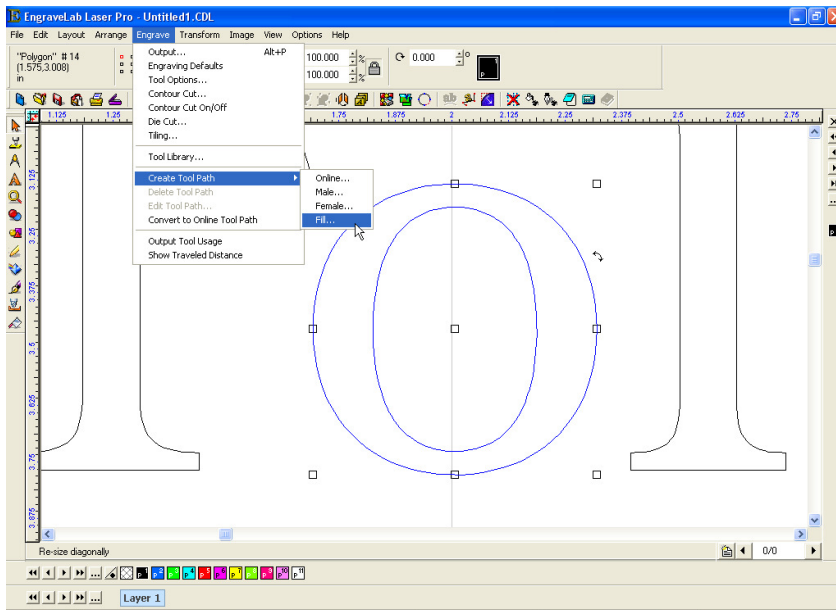

Once the fill is deleted select the text you wish to fill. **For text with voids on the center O, P, D ect.. You have to select the outline holding down the shift key and select the inside line.**

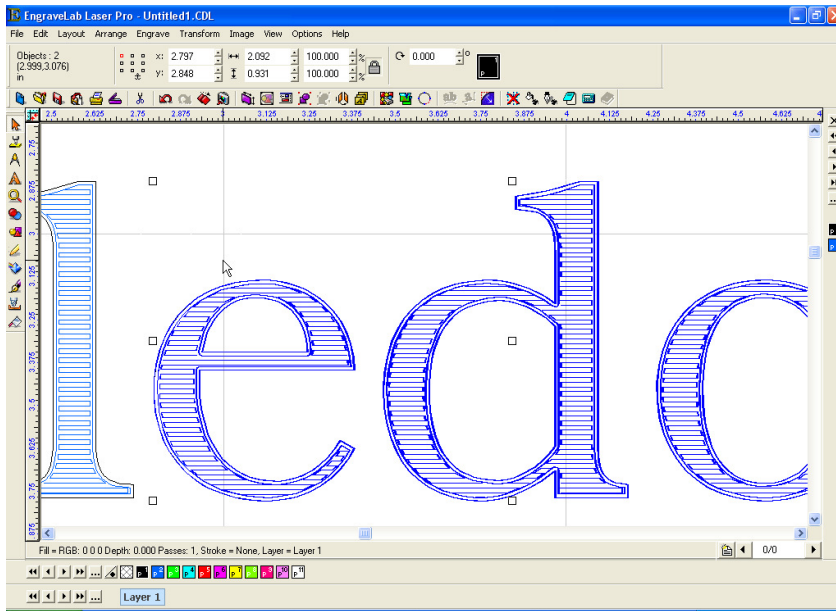

Holding the shift key to select every thing you want filled.

Now go to Arrange > make path> click off the text > then select the text  
Before the filling

Next step go to Engrave>Create tool path> Fill

Your text should be filled with the void in the center of the letter.
