

How to Create a Line in JLS

1. Set up plate *Height* and *Width* then click *Single job*.
2. Click on the green + icon and the yellow element icon (see figure 1)

(Figure 1)

3. Hold down the left mouse button and drag a box to desired size (the box will be solid black)
4. Click on Objects then Browse
5. Highlight the *Symbols.epl* under *Libraries* then scroll down to the *Line, Base* under *Symbols* (see figure 2)

(Figure 2)

6. Click *OK*
7. Click on *Edit* then *Edit Attributes* to open the *Attributes* box
8. Remove the check mark next to *Keep Aspect Ratio*
9. Click on *Execute* then *Preview* and you will see your line.

Note: You can size and position line in the Edit Attributes box or by using the transforms.
